## MACHINIST APPRENTICE

*"I went to a couple of career fairs in the past and I was looking for a machining company because I was interested in that trade. Fidelity had arranged a tour of their shop and after seeing all the amazing machines and resources, I left them with a copy of my resume. They got back to me a week later with an employment offer! At the internship, it's when I started to realize that my efforts were worth something. Here at Fidelity, they were as much invested in my growth as I was. This*

*has given me a wonderful opportunity and even a career so I can develop skills that I can take with me later in life. If I do end up opening my own machining shop, I would want to give back to allow others with the opportunity to learn and grow at an internship. Knowing that I am not the only one that has gone through this experience? It has just been amazing! Even talking with the other apprentices, they know what to expect with the process and I can learn from them as they are more experienced than I am."*
